

### BEAMEX

We recently took delivery of our new Beamex MC6-Ex ATEX certified calibrator (<https://www.beamex.com/calibrators/beamex-mc6-ex/>), with associated pressure modules. The MC6-Ex is an extremely accurate, reliable and stable calibrator. Each Beamex calibrator is delivered with a traceable, accredited calibration certificate as standard.

Alongside the calibrator we have also invested in Beamex's CMX Calibration Management Software (<https://www.beamex.com/software/calibration-software/>). This is essential in planning, managing, analysing and documenting all calibration work.

### AMETEK JOFRA

In addition to the new Beamex equipment, our new Ametek CTC Compact Temperature Calibrator (<https://www.ametekcalibration.com/products/temperature/temperature-calibrators/ctc-series-compact-temperature-calibrator>) arrived too. The CTC Series portable temperature calibrator is a fast, efficient, reliable dry block temperature calibrator designed for on-site use.

### WORKSHOP

With our recent office move, we now have a fully equipped calibration and testing room, which features our new equipment. Find out more about our installation, commissioning and calibration services on site and workshop repair and calibration services.
